APPROPRIATION is the main idea for our project.

The concept is based on the possibility of various applications and uses of the less available infrastructure. Using single elements that may be used in different forms to create a diversity of activities. We have divided the territory into 3 thematic spaces.

STRATEGY:

1. RECOGNIZING

Find the activities and actions present in the field. Learn and observe from the field.

2. EXPLORING ELEMENTS

Select different elements that are interesting to work with, and allow a quick adaptation.

3. IMAGINE A MIX-USE PLACE

After selecting the elements to work with, imagine new scenarios, what activities and actions these spaces can develop

rest area

This is a peaceful place to relax with closed benches to hide from the sun. In this space there is also a closed area with a library where you can exchange books.

sport area

In the sports area you can ride a skateboard, and there is a space that can serve as a court for various types of sports including basketball, volleyball and tennis.

play area

This area uses the existing landscape such as the slope to create a play area for children of all ages. The area can have a water-sand playground, tree houses, a slide right into the Neckar River and other exciting recreation activities

open cinema area

In this area, the bleachers can be used as seats for watching movies in the open air, as well as a platform for cultural events. Under the bleachers, you can find a washroom.
